To Whom It May Concern

This is to confirm the installation of C.U.E.S has been carried out at these premises during March of this year. The units have been installed on all the reach in and walk in refrigeration.

Since installation, the amount of cycling on and off of the units has fallen by 30%, which will no doubt improve the longevity of the condenser units.

Energy savings have been measured at around 18-20%, depending on the individual units, and this has resulted in savings of over a thousand pounds a year in total.

I would not hesitate to recommend installation of these units to refrigerators and freezers in order to save electricity and wear on the equipment.

Signed
